EDUCATION

Purdue University

B.S. Computer Science & Mathematics

May 2027

Minor: Finance

- **Awards:** USACO Gold · 6x Hackathon Winner · Top 1% LeetCode

EXPERIENCE

Amazon | Systems Development Intern

May 2026 – Aug 2026

- Built an automation service on AWS, cutting tier-generation time by **98%** across **100 MB+** enterprise workbooks
- Orchestrated a **6-stage** async data processing pipeline, scaling backend throughput by **20x** across **10,000+ jobs**
- Developed a low-level XML ZIP manipulation layer, ensuring **100%** byte-fidelity for **5,000** corporate assets
- Automated live distributed data enrichment from Redshift, eliminating **12,000** manual reconciliation steps per month

Handshake | AI Engineer

Jan 2026 – Apr 2026

- Built an RLHF pipeline for code LLMs, training on **50K+** preferences and improving **pass@1** by **18%**
- Engineered a sandboxed code-eval harness, scoring **250K+** generations at **7.4×** higher throughput

Caterpillar | Machine Learning Intern

Aug 2025 – Dec 2025

- Architected a PyTorch multi-horizon transformer, reducing WAPE by **24%** across **1M+** records
- Scaled distributed ML inference via Kubernetes, slashing forecasting latency for **500+ SKUs** down to **2.8 minutes**
- Deployed an automated Azure MLOps pipeline, processing **100K+** telemetry events/day for real-time model serving

Stealth Startup | Software Developer

May 2025 – Jul 2025

- Optimized game state synchronization to lower server costs by **30%** and packet loss by **25%** (**30K** player sessions)
- Overhauled ECS via event-driven architecture and object pooling, cutting latency spikes by **30%** and churn by **10%**

PROJECTS

Cathode – CPU Graphics Engine

- Built a CPU rasterizer (AArch64 NEON SIMD), rendering **50+ 1440p** scenes at **<2ms/frame** with **4x** speedup
- Designed a NTSC DSP pipeline with I/Q modulation, sustaining **114 MS/s** at **<0.5%** NRMSE across **13K** tests

Splice – Custom UNIX Shell

- Built an AST-based POSIX shell with pipes, redirection & job control, passing **1,200+** tests across **45** shell features
- Engineered process groups, signals & TTY control for **500 jobs**, passing **180K** stress iterations with zero deadlocks

Vibe – Social Network

- Built a WebSocket gateway with consistent hashing, sustaining **130K** concurrent clients at **<40ms p95** across **8** nodes
- Engineered ordered fanout with backpressure & idempotent delivery, sustaining **250K msg/s** with **<0.01%** loss

SKILLS

- **Languages:** Python · TypeScript · C/C++ · Go · Rust · Java · SQL · R · C#

- **Tools:** Git · Docker · Linux · Terraform · Kubernetes · Prometheus · Grafana · Valgrind · GDB

- **Technologies:** Next.js · LangChain · PyTorch · TensorFlow · Redis · Kafka · RabbitMQ · MongoDB · gRPC
