EDUCATION

Purdue University

May 2027

BS Computer Science & Statistics

Minors: Math & Finance

- **Courses:** Computer Architecture · Systems Programming · Analysis of Algorithms
- **Orgs/Awards:** USACO Silver · 6x Hackathon Winner · Boiler Blockchain · Data Mine

EXPERIENCE

Amazon | *Systems Development Intern*

May 2026 – Aug 2026

- Built a FastAPI automation service on AWS, cutting tier-generation time by 98% across 100MiB Excel workbooks
- Orchestrated a 6-stage async data processing pipeline, scaling backend throughput by 20x across 10,000+ jobs
- Developed a low-level XML ZIP manipulation layer, ensuring 100% byte-fidelity for 5,000 corporate assets
- Automated live distributed data enrichment from Redshift, eliminating 12,000 manual reconciliation steps
- Secured critical pricing endpoints using SSO, managing zero-trust RS256 token validation for 800 internal users

Caterpillar | *Data Science Intern*

Aug 2025 – Dec 2025

- Engineered ETL pipeline unifying 10 production data streams, improving paint optimization accuracy by 40%
- Built a Django-based anomaly detection platform over 15,000 events, reducing downtime investigation time by 60%
- Shipped Power BI/SQL analytics suite for plant KPIs, cutting manual reporting effort by 75%

Playtoon It | *Software Developer*

Jun 2025 – Aug 2025

- Optimized ECS & Netcode to lower server costs by 30% and packet loss by 25% (30,000 player sessions)
- Cut latency spikes by 40% and player churn by 20% through event-driven architecture and object pooling

Retail Hedging | *Software Engineer*

Mar 2025 – May 2025

- Implemented Auth0–Stripe payment gateway with RS256 JWT verification, securing 20,000 checkout sessions
- Tripled API throughput by replacing high-frequency client polling with tokenized API flow, reducing load by 70%

PROJECTS

POSIX – *Custom UNIX Shell*

- Handles 30 core Bash features with process control & I/O redirection, lowering command dispatch latency by 60%
- Supports 500 concurrent jobs with sub-5ms scheduling via fork/exec/waitpid, cutting zombie overhead by 45%

Freelance DAO – *Ethereum Marketplace*

- Designing a fault-tolerant freelance platform with a 3-of-5 multi-sig dispute resolution system (99% uptime)
- Reduced gas costs by 60% across 300 benchmark cases using Hardhat and compiler optimizations

Vibe – *Social Network*

- Scaled to 25,000 load-tested users with sub-50ms p95 latency using thread pooling and message queues
- Improved session reliability by 75% across 6,000 logins through persistent user authentication and session locks

SKILLS

- **Languages:** Python · TypeScript · Rust · C/C++ · Go · Java · SQL · R · C# · Swift · Kotlin
- **Frameworks:** Next.js · FastAPI · LangChain · PyTorch · TensorFlow · Redis · Kafka · RabbitMQ
- **Tools:** Git · Docker · AWS · MongoDB · Firebase · Linux · Terraform · Kubernetes · Prometheus · Grafana
